Dear Prof. Rai,

Welcome back to the community of the Associate Members of the Abdus Salam International Centre for Theoretical Physics! I am happy to inform you that you have been appointed

Regular Associate of the ICTP from 01 January 2017 until 31 December 2022.

This award is, however, subject to the availability of funds each year. The ICTP may at any time revise the terms of this agreement. Please refer to the Annex to this letter for details.

During the above period you will be entitled to 180 days living allowance and three round-trip fares. Associateship visits will not exceed 60 days in total, in the solar year. In order to obtain a travel entitlement your stay must have a minimum duration of 30 days. If you do not exhaust this allocation in the three associateship visits, you may use the remaining days in one or more visits, but in this case, travel expenses will have to be covered by other sources.

Visits to the ICTP should be planned preferably when scientific activities in your specific field of research are being held. Details about travel entitlements and visits are also in the Annex.

The Centre has assigned you Dr. Fred Kucharski as scientific coordinator to whom this letter is being copied. When you decide to carry out an associateship visit you must complete the Visit Form on your ICTP Portal, no later than 30 November of the year preceding this proposed visit. All requests will be considered taking into account the financial availability at the time.

Prof. Shailendra Rai K. Banerjee Centre of Atmospheric and Ocean Studies University of Allahabad Allahabad India Furthermore, in order to keep your award active, it is essential that you make an associate visit within the first three years of your appointment. Failure to meet this requirement will result in the termination of your award.

Finally, I would like to mention that since its inception in 1964 the ICTP has gained a world-wide reputation as a Centre of excellence and as an instrument for the promotion of physical sciences in developing countries. With the maturity of the Centre, which has recently celebrated its 50th anniversary, we feel that the time has come to emphasize and expand its role, to the largest possible extent, by building up communities of scientists in developing countries. We rely on you, as an Associate, to strengthen the results already achieved and to promote initiatives in the developing countries, including your own. We look forward to having your personal involvement in the execution of our common mission.

With my best personal regards,

Yours sincerely,

Dear Mahvish Anjum,

We are very pleased to advise that your application to the Paris IGU Travel Grant Program has been successful.

These grants have been awarded on a competitive basis to help defray the costs of in-person participation in the 2022 IGU Centennial Congress, 18-22 July in Paris, France. Your grant is intended to provide a partial contribution to the costs of registration, transport and/or accommodation. We remind you that full participation, including at the closing ceremony, is required.

Your grant of 650 Euros will be paid to you in cash (Euros) at the conference in Paris. To collect your grant you will need to visit the IGU Executive Committee's 'office' at the Congress with your Congress badge and appropriate identification (e.g. your passport). You will then be given the money and asked to sign a receipt acknowledging that you have collected your award.

The Local Organising Committee of the congress joins in this support of your attendance at the Congress with registration at the early bird rate. For this, we ask that you contact directly the co-chairs of the committee, Nathalie Lemarchand: nlemarchand02@univ-paris8.fr and Antoine Le Blanc: Antoine.Le-Blanc@univ-littoral.fr

We congratulate you on your success in this grant program and look forward to seeing you at the IGU Centennial Congress in Paris!

Yours sincerely,

A Brief Study of Cow Domestication in Vindhya Gangetic Region

Reema Kumari* Sarvesh Singh**

Abstract

Cattle have been invaluable for the transition of human society from nomadic hunter-gatherers to sedentary farming communities throughout much of Europe, Asia and Africa since the earliest domestication of cattle more than 10,000 years ago. Between the late Pleistocene and early Holocene, the most commonly occurring cattle species was the aurochs (Bos primigenius), ranging from northern Africa to both the Atlantic and Pacific coasts of Eurasia. Similar to sheep and goats, archaeological and genomic evidence suggests that theancestors of taurine cattle (Bos taurus) were domesticated from Bos primigenius primigenius in the Fertile Crescent during the Neolithic. Success in domesticating many species of animals and plants fa cilitated the gradual change in human societal behaviour, shifting from nomadic foragers and hunters to a sedentary farming society. Cattle provide humans with food, hides and draught power for farming, transport and construction. Animal husbandry and food production may have contributed to the first uneven divisions of labor within early human societies.

Introduction

The Vindhya Ganga plain was initially very rich in wild flora and fauna due to favourable climatic. The Vindhya occupying part of Uttar Pradesh, and Madhya Pradesh, bounded on the north by the Ganga valley and on the south by the son, is divided into two parts. The first known as the Kaimur is situated between Lat . 24 0 32" N and 24 0 52 N. The second part situated between Lat . 24 0 57" 30"N and 25 0 8" 45" N. It is an evenly undulating plateau merging gradually at many places with the Ganga alluvium. It tributary the Adva divides the Kaimur in to two: the northern part of which is drained by the Belan and the southern by son. The hill parts, on the two sides of the river, The Kaimur in the south and the plateau on the north, are covered by thick forests much of which has suffered wantondestruction in recent year (Sharma, G.R. 1980:2).

The middle Ganga valley measuring about 144,409 sq km, is bounded by the Himalayan tarai in the north, Vindhyan plateau in thesouth, Ganga Yammuna confluence in the west and Bihar Bangal border in the east (Singh,R.L,1971:183).

One of the most important aspects of the evolution in human culture was the beginning of human relationship with plants and animals in the Mesolithic period that developed in to domestication in the Neolithic period.

Domestication is the process of adopting wild plants and animals for human use. Reorganization of wild animals and plants in to domestic and cultivated forms according to the interests of people. In its strictest sense, it refers to the ignition stage of human mastery of wild animal and plants. The fundamental distinction of domesticated animals and plants from their wild ancestors it that they are created by human labor to meet specific requirement or whims and are adapted to the conditions of care and solicitude people mention for them. Domestication began in different part of the world at different times, because the original
